

# Covers

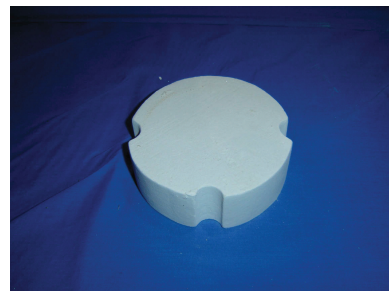

Insulation Specialties manufactures ceramic fiber covers for many insulating needs. Covers can be made in several shapes and configurations. Materials can range from 2300° LD to 3000° MD and can be rigidized with col. Silica or surface treated with ISAwash. Thickness available up to 6" thick.

For areas that need extra strength, a metal frame work can be formed directly into the cold face or even encapsulated in the vacuum formed cover. Handles or lifting attachments are also available.

Customized shapes may be CNC machined for a precision fit.

Call, fax or email your request today!
